Dear Forest Lake Residents,

We have an update to share on the progress of our ramp project research.
Attached are 3 documents from our UW Platteville engineering project student team at the midway point of their research.
While no decisions have been made yet on the feasibility or final design of constructing a ramp on FL, the information in the documents attached begins to identify our options.
Please keep in mind that the goals of this project are to create an aesthetically pleasing, lifetime, permanent solution to launching recreational and maintenance equipment onto the lake while preserving the natural landscape and beauty of the proposed site.
Any costs referenced in the presentation are for illustration purposes only. Actual costs for the final recommended solution will need to be explored fully and agreed upon by the association.
We welcome your feedback and questions after reviewing the progress the students have made to date.

FLIA Ramp Project Committee,
Kevin Baldwin, Jeannine Kitzerow, Rob Boehm, Gretchen Bohnhoff
